

February 2009

The safety and quality of the products provided to you by FS-USA is very important to us. We have carefully reviewed all the new mandates included in the Consumer Product Safety Improvement Act of 2008. We have an ongoing testing program in place, by a third party, to ensure continued compliance as outlined by the Consumer Products Safety Commission.

Because the government's mandates and reporting requirements change frequently, we have taken the added step of contracting with a consulting firm that offers us expert guidance and support to specifically ensure that our ongoing safety testing program meets the CPSC, ASTM and EN71 standards.

All our PVC Play Balls have been tested for Phthalates and meet or exceed the specified limits. We are confident in the "Phthalate Free" designation we have noted on all our marketing materials and product packaging.

Based on a program of reasonable testing by a third party, we can confirm the lead content of our products are within the specified limits and the testing will be done on a regular basis to ensure continued compliance.

All FS-USA products are appropriately labeled as required by the Consumer Products Safety Commission and are submitted to an independent quality testing site for a review to ensure compliance.

Like many other vendors, we have invested a great deal of time and money to ensure compliance with all the new regulations. You can be assured that we are committed to the continuation of testing by an independent quality test institute that corresponds to the directives of ASTM and EN71 and the CPSIA.

Your continued support of our product line is most appreciated.
